Fotocopiando la carta riprodotta qui sotto, si può ottenere un'auto più realistica. Per motivi di pubblicazione, ovviamente è in scala di grigi, ma questo limite può essere superato scansionando l'immagine e modificandola con un programma grafico.

Usando il sistema del computer è consigliabile far stampare sulla parte bianca di un foglio metallizzato.

Quando si riproduce il modello bisogna partire con il foglio posizionato nello stesso modo di come è presentato.

Buone pieghe, Pasquale.
